(1) Preparedness to adapt to changes in business environment

- Business model centered on recurring profit, which is long-term, stable earnings
- Swift decision-making enabled by a flatter organizational hierarchy and delegation to departments
- Risk-diversified business portfolio
- Improving capital efficiency by continual cost reduction and cash flow improvement regardless of business performance

[Reference] Revenue structure

Operating income = $\underbrace{\text{Recurring profit}}_{}$ + $\underbrace{\text{Acquisition cost}}_{}$

Long-term, stable Mainly variable costs earnings

Recurring profit is long-term, stable earnings, and unlikely to see a large deterioration in the short run. Acquisition costs are variable costs, over which the company has control on its own. Accordingly, the revenue structure is adaptable to changes in the business environment.

Remuneration of executive directors

Remuneration of executive directors is determined based on indices including prospective earnings and operating profits in order to incentivize executive directors to improve the intrinsic corporate value from a long-term perspective and to achieve performance targets from a short-term perspective. The fixed portion of the remuneration is set to be smaller than the variable portion; therefore, when the targets are achieved, the amount of total remuneration will increase while the percentage of the fixed portion will decrease. When the targets are underachieved, the total amount of remuneration will decrease while the percentage of the fixed portion will increase.
